About the Text

The text is designed for a course in numerical approximation techniques. The aim is to provide students with a solid understanding of the basic concepts of numerical approximation and to develop their ability to apply these concepts to a wide range of problems. The text is written in a clear and concise style, and it includes a large number of examples and exercises to help students understand the material. The text is divided into several chapters, each covering a different aspect of numerical approximation. The chapters are: 1. Introduction to Numerical Approximation, 2. Linear Approximation, 3. Polynomial Approximation, 4. Spline Approximation, 5. Trigonometric Approximation, 6. Integral Approximation, 7. Differential Equations, 8. Eigenvalue Problems, 9. Matrix Approximation, 10. Convergence of Iterative Methods, 11. Error Analysis, 12. Applications of Numerical Approximation. The text is suitable for students in engineering, science, and mathematics. It is also suitable for self-study. The text is available in PDF format for free download.
